

Identity Manager 2 (DirXML)

Advanced Technical Training

The primary focus of this Advanced Technical Training course is for students to gain a thorough understanding of Identity Manager 2 by utilizing real life scenarios and software that could be used in their existing business environment. Students will configure drivers that will work together in a total Identity Management framework, starting from the top with the application that owns the identities in an organization down to each application systems.

OBJECTIVE

Students will learn to use Identity Manager 2 to accelerate the flow of information throughout an organization; enhance efficiency by removing the barriers between applications, data stores and network platforms; and (leveraging Novell eDirectory™) creating DirXML policies that automatically distribute new and updated identity information within an environment.

COURSE OUTLINE

1. Architecture
2. Administration
3. Identity Manager 2 Driver Overview and Install
4. Password Management overview
5. Upgrading from DirXML 1.1a to Identity Manager 2
6. Policy Builder
7. Identity Manager 2 Tracing, Logging, and Nsure Audit Overview
